“Algalif is built on a foundation of quality, purity, and sustainability, and we remain firmly committed to these principles”

AlgaEurope 2022 is glad to have a support of an internationally awarded industry leader in production of high quality sustainable natural astaxanthin from microalgae – Algalif, our Platinum Sponsor!

Iceland provides the perfect starting point for algae cultivation – an astoundingly pristine environment, free of contaminants and pollutants; access to abundant, pure water; and a continuous supply of renewable energy. The Algalif facility is 100% powered by geothermal energy. Even with access to abundant natural resources, Algalif takes a responsible approach to water management.

Algalif’s unique, enclosed photobioreactor cultivation system and its proprietary three-phase cultivation process, help ensure optimal growth of the microalgae and high yield of pure astaxanthin from *Haematococcus pluvialis*.

At Algalif, they strive to make products that exceed industry standards and customer’s expectations. And Algalif work continuously to improve the effectiveness of Quality Management System.

Astalif Astaxanthin is a powerful natural antioxidant with multiple health benefits and a solid scientific foundation. Produced to rigorous quality and sustainability standards, Astalif has applications in brain health, eye health, healthy aging, cardiovascular health, muscle endurance/recovery and skin health.

Within AlgaEurope Conference Program Tryggvi Stefánsson, CCO, and Jan Eric Jessen, Head of R&D, will share their knowledge about Astaxanthin, its production and cultivation.

More information about Algalif at algalif.is

You will be able to meet Algalif at AlgaEurope 2022 on 13 – 15 December in Rome, Italy. Registration is open!
