SANI Membranes to show their Vibro-Lab3500 at AlgaEurope 2022!

SANI Membranes, bronze sponsor of AlgaEurope 2022, is proud to announce the introduction of the new, smaller version of the Vibro-I series, bridging the gap between benchtop filtration units and industrial units.

CEO, Henrik Hjelmssmark, says *“Our Vibro-Lab3500 has long been the workhorse for filtration, separation and concentration processes in the algae industry. With the introduction of a smaller Vibro-I unit, the 2.5m² unit, scaling your production capacity has become even simpler”*. Due to the unique technology of Vibro® Filtration, the process from benchtop filtration units is identical to that of larger units, meaning that the technology is ideal for scaling, as the user can expect the same results when going from one Vibro® unit to another, regardless of size.

SANI Membranes are already well-known in the algae industry for the Vibro® Technology, characterized by the ability to replace complex separators and being able to handle harvest, concentration and refinery with just a single unit that is easy to setup and use. Additionally, algae manufacturers benefit from reduced shear when handling fragile algae and being able to reach very high concentrations, such as 190 g/l *Nannochloropsis* and 290 g/l *Chlorella*. SANI Membranes will be demonstrating algae harvest on the Vibro-Lab3500 at AlgaEurope 2022.

By appointment, customers will be able to book a timeslot to test their own algae solution on the Vibro-Lab3500. You can book a timeslot through phn@sanimembranes.com

AlgaEurope offers a unique opportunity to learn and understand all about algae production and commercialization. It is the place for the development of research, technology, and industrial capacities in the field of Algae. AlgaEurope is organised by DLG Benelux and EABA, the European Algae Biomass Association.

You will be able to meet SANI Membranes at AlgaEurope 2022, 13 – 15 December in Rome, Italy. Registration is open!
