

**Decolube  
Drum Transfer Unit**

# Decolube Drum Transfer Unit

The **Decolube drum transfer unit** is a device designed for the purpose of transferring liquids from drums to other containers. It offers a budget-friendly alternative to the standard Decolube drum transfer unit, omitting the inclusion of a filter. This unit operates on 230 Vac power supply and is equipped with both a suction tube and a 4-meter pressure hose.

The Decolube drum transfer unit stands as a versatile tool with a wide range of applications for liquid transfer. Its straightforward operation makes it particularly well-suited for businesses and individuals that require frequent liquid transfers.

## Key features of the Decolube Drum Transfer Unit

- Budget-friendly version without a filter
- Powered by 230 Vac
- Includes a suction tube

# Decolube Drum Transfer Unit

---
