

LUSTOR

LUBRICATION STORAGE SYSTEM

The
System
that keeps
your oil
clean

Smart and Safe Storage & Dispensing

Success of a lubrication programme depends on the methods applied for storing, transferring and applying lubricants to your machines. That's why storage and handling is an important area, where the quality of your lubricants can be affected.

New oil is, with a few exceptions, DIRTY for most applications. Consequently the first step to guarantee that clean oil enters your machine is to filter the oil to an acceptable level.

One of the techniques used to filter the oil is the use of a comprehensive lubricant storage system - Luster! The bulk system that combines storage, filtration and breather technologies to keep lubricants clean and dry before they enter your equipment.

World Class Lube Room

Luster keeps your lubricants organised and contaminants free. A flexible storage system, designed to constricted space requirements (4 lubes/1.2 m²).

The Luster System is available in three sizes: 125 litre, 250 litre and 500 litre. The 250 litre can be stacked two high. There is also a Wall Mounted System for use in conjunction with supplier's drums. Each System can have a lubricant identification label located on the front of the system.

Features

- MDPE tanks
- Pneumatic pumps
- 3-way filtration
- Oil consumption meter
- Auto shut-off dispensing tap
- Oil level indicator
- Breather
- Spill retention pallet
- Drip Tray
- Drum transfer hose kit

Benefits

- Cleaner environments
- Less contamination
- Improves lubricant quality
- Lower lubrication costs
- Lower maintenance costs
- Less downtime
- Increases health, safety and productivity
- Complies with Lubrication Reliability
- Stackable all-in-one system
