

Lubristation M - Tanks

Storage & Conditioning & Distribution of lubricants

Lubristation M Tanks:

Oil transfer solution with reservoirs or tanks manufactured to customer specification or with standard lubricant storage tanks (in HDPE, steel, Stainless steel), example 275 l HDPE tanks.

All versions are equipped according Best Practice in Lubrication Management principles, i.e. with filters and breather dryer in order to comply with ISO 4406 cleanliness levels of the lubricants.

Pumps: pneumatic, electric, manual if possible (oil viscosity)

These systems are designed for easy and safe access with clean lubricants to the machine for top ups and oil changes .
