Concept of Project Apps

Project Apps to accelerate your performance for project-based operations

Scheer develops accelerators for Service organizations with project-based activities. The Scheer Project Apps reduces work effort, improve the speed of completeness and eliminate human errors in daily work activities.

These Project Apps are intended to be used by project managers, project administrators, project planners during the setup, planning and execution of work packages. Roles that have authorization and access to view and manage hours and equipment within projects. For these roles, the Scheer Project Apps are significant time savers and eliminate the risk of human errors.

In addition, the deployment of these Business Apps is fully compliant with standards and authorizations of the SAP Cloud ERP environment

New way to extend functionality

Scheer is using the following components to extend the functionality on top of the standard end-to-end processes of your SAP ERP Cloud.

Side by Side Extensions

The Project Apps are so called Side-by-Side extensions. They run on the SAP Cloud Platform leveraging SAP standard **SOAP** and **OData services**. This makes the Project Apps release independent from the SAP Cloud ERP.

The Scheer Apps are not developed in the Software Development Kit of a particular SAP ERP solution.

SAP Cloud Platform

The SAP Cloud Platform offers the highest security and authorization capabilities for using additional Business Apps in a controlled way.

The Apps run on the SAP Cloud Platform with all authorization and security policies that are activated and can be used by every company or country in your SAP tenant environment.

SAP Fiori User Experience

The Apps are developed with SAP Fiori to establish a consistent look and feel for the end-user and can be used on a desktop or tablet. This intuitive user interface makes it easy to be deployed even for non SAP ERP users.

License Plan

The license of a Scheer Project App(s) implies a copy of the source of the App(s). The next step is to install and to configure the App(s) in the SAP Cloud Platform and make the connection to the Cloud ERP environment. Then, they are ready to be used by all entities within your SAP Cloud ERP tenant.

You are entitled to fine-tune and personalize the Project App with additional functionality. Your own developer or Scheer can do these extensions.

Pricing and Proof of Concept

Pricing of a Project App starts at €7.500,00.

We offer a Proof of Concept, which includes the deployment of the App for a single country for two months to experience the benefit of this Project App.

The costs of a Proof Of Concept is €1.500,00, including a single change request to fine-tune the app. The fee for the proof of concept is credited when the App is bought

Suite of Project Apps

Existing Project Apps

Time Recording for Employees

This App allows Project and HR time recording for teams working on an assignment. A team supervisor or administrator can record time of an entire team. With an easy to use wizard, regular and overtime can be written for an entire week in a few clicks.

Also, employees who are not planned can be added to the project on the fly.

Progress against planned time is for each individual employee instantly visible.

Time Recording for Equipment

This App allows usage recording for billable or non-billable equipment used on an assignment. The usage can be recorded for an entire week in a few clicks. Equipment which are not planned can be added on the fly.

Progress against the planned usage are instantly visible.

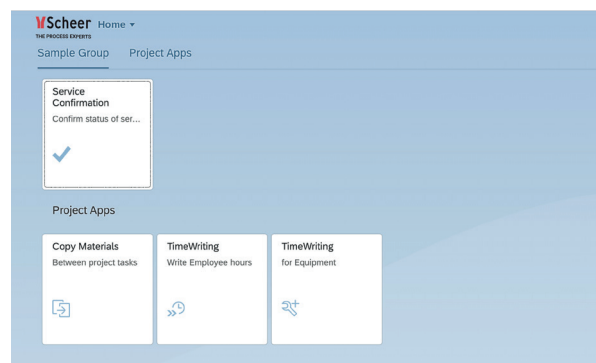

Recording Service Confirmations for Unit-based services

This App allows recording of unit-based activities performed on an assignment. With an easy to use wizard the activities can be recorded for an entire week. Progress against the planned activities are instantly visible. Equipment which are not planned can be added on the fly.

Expected additional Project Apps:

Manage Orders

This App allows quick creation and changes of large and complex Sales Orders including price details. The lines of a sales order can be uploaded from an excel spreadsheet and further enhanced in the app before creating the sales order in SAP.

Create Assignment Rules

This App allows quick creation and changes of the assignment rules of project tasks to Sales Order revenue lines. The rules are automatically generated. Changes can be applied with a easy to use wizard.

Copy Materials

This App allows quick creation of materials in a project. The materials are automatically planned for the duration of the project based on a project template.

Copy Employees

This App allows quick creation of Employees and Service Agents in a project. The Employees and Service Agents are automatically planned for the duration of the project based on a project template.

Add your required App

It is possible to define and develop your own App that is covering your specific requirements. Pricing and conditions on request.

Time recording Employees

Description

A team supervisor or administrator can record time of an entire team. With an easy to use wizard he/she can write regular and overtime for an entire week in a few clicks.

This Time Recording Employee App supports quick recording of project and HR time for individual team members across projects and tasks

Use cases

This App is a significant time saver to validate, complete or adjust time recording from individual team members in a single view.

Filter Options

The App has standard the following filter and selection capabilities to define the required business context to manage the Employee recordings:

1. Company and Cost Center
2. Search the :Project by selection per
 - My, active or all projects
 - Project Name or Number
 - Customer Name
 - Person Responsible
 - Responsible Cost Center
3. Select the Project and get insight to:
 - Assigned Team Members
 - Tasks per Member
 - Actual and Planned Hours per Member/Task
 - Activity details

Time Record Employees Features

The Time recording Employees App has the following features to quickly adjust the hours for both project or HR related tasks:

- Adjust **Actual** and/or **Billable** durations including descriptions
- Apply adjustments to selected team members with a single click for all days of the week.
- Show all project tasks to get insight in underlying details
- Show **Other projects** to get quick insight in time recordings for other project
- Include **Weekends** to quickly adjust hours for the weekend days for all team members
- Use the **Copy from last week** including the option to select the members
- Easily Add or adjust **HR Tasks** to complete or adjust time recordings for the team

About Scheer

As a consulting and software house, Scheer supports companies in the development of new business models, in the optimization and implementation of efficient business processes and in the reliable operation of their IT.

A particular focus in the development of products and services is to accompany companies in the digital transformation industry-specific.

Scheer has entered into new partnerships with its customers, for example with SAP S/ 4HANA segments. With the innovative software architecture Scheer BPaaS (Business Process as a Service) and current developments of ARIS solutions, Scheer reliably supports companies on their way to digital business models. In doing so, customers benefit from in-depth industry expertise in a wide range of consulting projects, which can also include IT implementation with SAP and the option of SAP on Azure.

The Professor of Business Informatics, inventor of the ARIS concept and entrepreneur August-Wilhelm Scheer is shareholder and advisory board member of Scheer GmbH. He supports her through his many years of experience in the IT industry. Prof. Scheer also stands for the close exchange with science and research, which ensures the innovative strength of the fast-growing company.

Scheer GmbH is internationally presented by Scheer Austria, Scheer Netherlands, Scheer Turkey and Scheer E2E Switzerland.
