

## Press Release

1<sup>st</sup> International Seaweed Conference USA

# Seagriculture

7 - 8 SEPTEMBER 2022  
PORTLAND (ME), USA

### **North American Kelp on the tranquil coast of Maine harvests seaweed and cooperates with local and national organizations to produce sustainable kelp products.**

Seagriculture USA 2022, the first international seaweed conference in North America will take place from 7 - 8 September 2022 in Portland, Maine.

The Seagriculture Conference brings together the world's top experts from various industries, large corporations and small companies, environmental organizations and foundations who are united in their work on seaweed. Different species of seaweeds can be used as human foods, cosmetics, fertilizers, and the extraction of industrial gums and chemicals. Seaweeds have the potential to be used as a source of long- and short-chain chemicals with medicinal and industrial uses.

The organizers appreciate the support of local companies and are glad to see North American Kelp as a Gold Sponsor of the Seagriculture USA.

North American Kelp has been a trusted source for responsibly and sustainably harvested kelp products for 50 years. During that time, they have never steered away from producing high quality kelp meals, soluble powders, and liquid extracts in the Midcoast region of Maine. They not only provide high-quality kelp to commercial entities, but also to manufacturers and formulators who use seaweed as an ingredient in their end use products. Whether an ingredient used in livestock feed, wastewater treatment, fertilizers, pet foods, or soil amendments, plants and animals thrive on the potent nutrients and bioactive compounds found naturally in the seaweed they harvest from the Atlantic Ocean.

Sustainability has long been a focus since North American Kelp's beginnings in 1971. They continue to work closely with local and national organizations, as well as their harvesters, to focus on resource management, best practices, and research efforts. Internally they monitor their seaweed beds and perform routine tests to ensure proper harvesting, as well as water and sector quality. Dedication to protecting this renewable resource for future generations remains their highest priority.

North American Kelp's strategic location on the idyllic coast of Maine provides a superb position to guarantee their kelp is processed quickly in their facility. The short time between harvest and processing means that their products maintain their integrity and freshness for longer.

It will also be possible to communicate with the North American Kelp's team members during the Seagrass Conference, exactly during the trade shows that will be held on the first and second days, 7 & 8 September. Check the program: <https://seagrass-usa.com/conference-program/>
