The Seagrass conference has built up a solid reputation as the leading conference for the seaweed industry, the Seagrass conference in Europe has been successfully organized since 2012.

The demand for edible seaweeds (or marine algae) is increasing in Europe. Seaweed (macroalgae) grows in a variety of forms and colours in the ocean as well as in freshwater environments. Its biochemical composition and properties make seaweed a valuable material, and its range of applications is growing as current R&D technologies are refined and new discoveries are made.

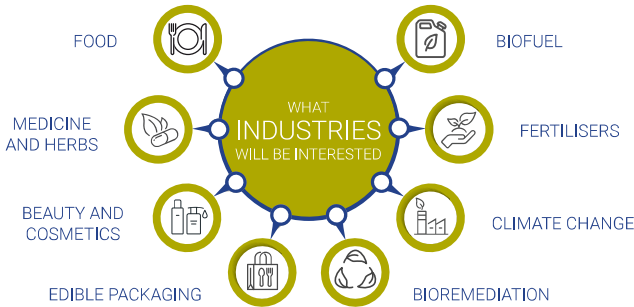

12th International Seaweed Conference EU

Seagrass
