

ALGAEBRA

A TRADING HOUSE & TRANSACTION OS FOR THE GLOBAL MACRO & MICRO ALGAE SUPPLY CHAIN

Trading macro and micro algae, both cultivated and wild-harvested. **Built for scale. Built for compliance. Built for the algae economy.**

WHAT ALGAEBRA DOES

Algaeбра operates as a specialist trading house for macro and micro algae, both cultivated and wild-harvested, while also providing software that standardises the full transaction lifecycle across counterparties. We execute trades as principal and offer the transaction OS as shared infrastructure for the broader market. **It is a shared transaction layer** – purpose-built for specification-heavy commodity trade between companies operating across Europe and globally at the frontier of the bioeconomy.

ONBOARDING & COMPLIANCE

Counterparty verification, KYB, and regulatory compliance managed within the platform from day one.

QUALITY & COA MANAGEMENT

Certificates and quality documentation attached directly to batches and trade records.

INVOICING & SETTLEMENT

Automated invoicing tied to confirmed delivery and quality sign-off, reducing dispute and delay.

BUILT TO SCALE BEYOND ALGAE

Starting with macro and micro algae, both cultivated and wild harvested, Algaeбра is designed to grow from a European trading house into a global transaction infrastructure for fragmented commodity trade – expanding the same trading model and OS into adjacent specification-heavy bioeconomy verticals worldwide. The same friction that limits algae trade exists across dozens of emerging categories. We are building the rails first.

SOURCING & CONTRACTING

Structured RFQ workflows and standardised contracts replace informal negotiations and email threads.

BATCH TRACEABILITY

End-to-end traceability across the full supply chain, audit-ready at every stage of the transaction.

LOGISTICS COORDINATION

Freight and logistics steps coordinated and documented within the same transaction workflow.

COME TALK TO US

Meet the team at our booth to see the platform and discuss how Algaeбра fits into your supply chain or investment thesis.
