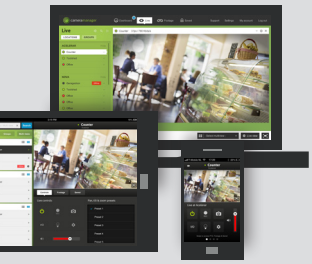
- Intelligent alarming when humans & objects are detected
- An affordable, flexible & zero-configuration video surveillance solution

Panasonic

cameramanager go!

all-in-one
cloud-based video surveillance solution

Revolutionize the way you secure your business with Cameramanager go!: the world's cleverest all-in-one cloud-based video surveillance solution. By taking your video surveillance to the cloud you get access to CLVR, our clever human & object detection technology. With Cameramanager go! & CLVR, no intrusion will go unnoticed.



Intelligent alarming

With the Cameramanager go! cloud camera and Cameramanager apps you can check up on your business no matter where you are. Use your computer, smartphone and tablet to view real-time videos in the cloud and, with CLVR, review footage based on human, object, motion, sound & heat detection. Cameramanager go! is an affordable, flexible & zero-configuration solution, usable without any prior knowledge of video surveillance. *It's that simple.*

CLVR detection

CLVR

Whether it's day or night: Cameramanager go! with CLVR will tell you when something is up, so you can take direct action. CLVR is a cloud-based and real-time human & object detection feature in the Cameramanager app. When your camera detects a human or object, our application immediately sends you an alert with a picture of the event. Constantly keeping an eye on what your camera is recording now belongs to the past.

Ready to go within minutes

Cameramanager go! is installed within minutes. Hassle free, because it is all automated. After connecting your camera to our application, activate CLVR with just the click of a mouse-button. Our application and your camera will do the rest. Depending on the cloud storage bundle you choose, we will store your footage for 24 hours, 7 days or 30 days.

Cameramanager go! consists of:

- The Cameramanager Cloud Camera
- The Cameramanager go! application with CLVR*
- A cloud storage bundle with a storage duration of 24 hours, 7 days or 30 days
